SUMMARY

Engineering manager with 12 years building and leading SaaS product teams. Spent the last 5 years scaling backend platforms at high-growth startups, from first engineer to a 20-person org.

EXPERIENCE

Engineering Manager — Fluxbase

2021 - Present

- Lead a 14-engineer team across 3 squads shipping the core billing and usage platform
- Scaled the platform from 2M to 40M events/day without a rewrite, through incremental sharding
- Reduced production incidents by 65% by introducing a formal on-call rotation and postmortem process
- Grew the team from 4 to 14 engineers, hired 6 directly

Senior Software Engineer to Staff Engineer — Fluxbase

2019 - 2021

- Designed the multi-tenant data architecture that became the foundation for the platform's growth
- Led the migration from a monolith to 6 core services with zero customer-facing downtime

Software Engineer — Rennet Data

2015 - 2019

- Built the real-time analytics pipeline processing 500K events/minute at peak
- Shipped the first version of the customer-facing dashboard, adopted by 80% of paying customers within 6 months

Software Engineer — Bitworks Labs

2013 - 2015

- Full-stack engineer on a 6-person team building an early SaaS scheduling product
